A use of case diagram

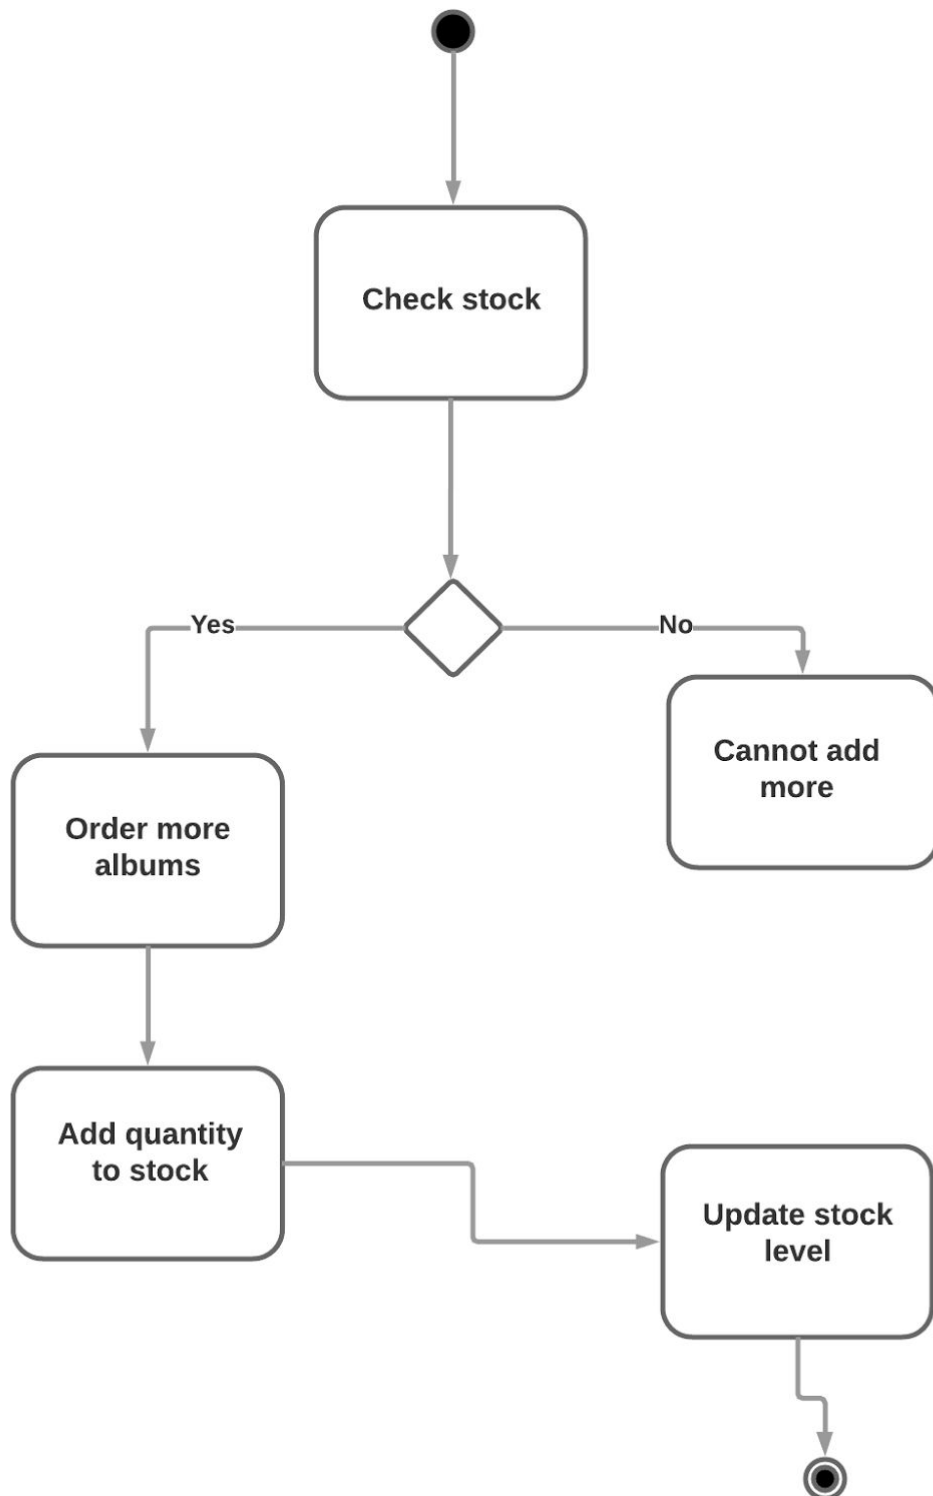

AD - 2 Create a Class diagram using your Use case diagram.

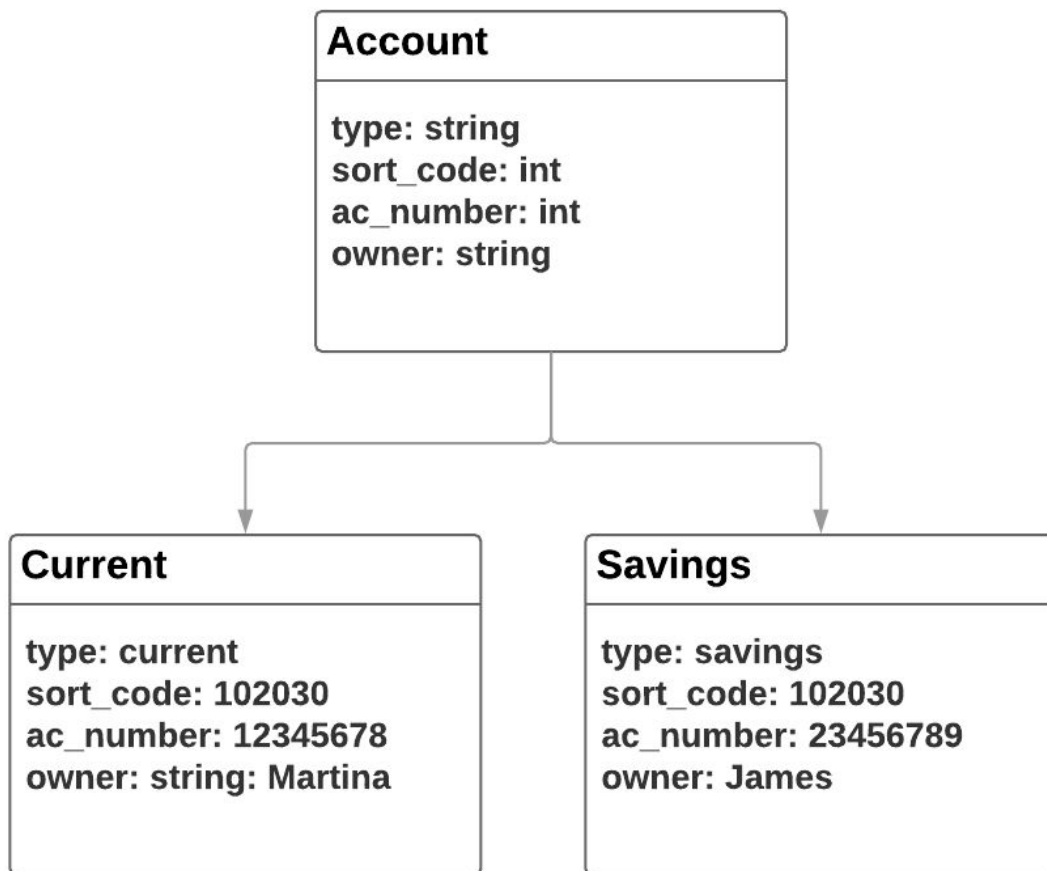

AD - 3 Object diagram

AD - 4 Activity diagram

AD - 5 Inheritance diagram

AD - 6 Implementations Constraints

Constraints	Possible effect of constraints	Details
Hardware & Software platforms	My Web app can not be used on a small screen devices (eg. mobile phones, tablets). This will cause a negative impact to any user trying to work with the app not on a desktop/laptop.	Time constraints did not allow me to implement a fully responsive CSS for this app.
Performance requirements	User cannot sort Albums by quantity. This can be quite frustrating for the user as they will need to check each item manually.	Time constraints did not allow me to implement this functionality.
Persistent storage and transactions	All data is save locally. This can lead for a risk of losing all data if something will happen to the machine.	Budget constraints, customer did not want to invest in external server to persist data.
Budgets	There was no budget used in this project.	Personal project for the course of codeclan.
Time	Due to time constraints, not all desired functionalities were developed and implemented	The app is usable but it could have been enhanced with more features for better user experience.
